

COMPANY OVERVIEW

United States' Leading Silver Producer

March 2022

RESPONSIBLE. SAFE. INNOVATIVE.

CAUTIONARY STATEMENTS

Cautionary Statement Regarding Forward Looking Statements

This presentation contains "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, which are intended to be covered by the safe harbor created by such sections and other applicable laws, including Canadian securities laws. When a forward-looking statement expresses or implies an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, such statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by the forward-looking statements. Forward-looking statements often address our expected future business and financial performance and financial condition and often contain words such as "anticipate," "intend," "plan," "will," "could," "would," "estimate," "should," "expect," "believe," "project," "target," "indicative," "preliminary," "potential" and similar expressions. Forward-looking statements in this presentation may include, without limitation: (i) new mining method implemented at Lucky Friday should improve safety and increase productivity; (ii) increased demand for silver due to transition to clean energy; and; (iii) mine-specific and Company-wide 2022 estimates of future production, sales, costs of sales and cash cost and AISC per ounce (in each case after by-product credits), as well as Company-wide estimated spending on capital, exploration and pre-development for 2022. The material factors or assumptions used to develop such forward-looking statements or forward-looking information include that the prices assumed in the calculation of cash cost and AISC will occur and the Company's plans for development and production will proceed as expected and will not require revision as a result of risks or uncertainties, whether known, unknown or unanticipated, to which the Company's operat

Estimates or expectations of future events or results are based upon certain assumptions, which may prove to be incorrect, which could cause actual results to differ from forward-looking statements. Such assumptions, include, but are not limited to: (i) there being no significant change to current geotechnical, metallurgical, hydrological and other physical conditions; (ii) permitting, development, operations and expansion of the Company's projects being consistent with current expectations and mine plans; (iii) political/regulatory developments in any jurisdiction in which the Company operates being consistent with its current expectations; (iv) the exchange rate for the USD/CAD and USD/MXN, being approximately consistent with current levels; (v) certain price assumptions for gold, silver, lead and zinc; (vi) prices for key supplies being approximately consistent with current levels; (vii) the accuracy of our current mineral reserve and mineral resource estimates; (viii) there being no significant changes to Company plans for 2022 and beyond due to COVID-19 or any other public health issue, including, but not limited to with respect to availability of employees, vendors and equipment; (ix) the Company's plans for development and production will proceed as expected and will not require revision as a result of risks or uncertainties, whether known, unknown or unanticipated; (x) counterparties performing their obligations under hedging instruments and put option contracts; (xi) sufficient workforce is available and trained to perform assigned tasks; (xii) weather patterns and rain/snowfall within normal seasonal ranges so as not to impact operations; (xiii) relations with interested parties, including Native Americans, remain productive; (xiv) maintaining availability of water rights; (xv) factors do not arise that reduce available cash balances; and (xvi) there being no material increases in our current requirements to post or maintain reclamation and performance bonds or collateral related thereto.

In addition, material risks that could cause actual results to differ from forward-looking statements include, but are not limited to: (i) gold, silver and other metals price volatility; (ii) operating risks; (iii) currency fluctuations; (iv) increased production costs and variances in ore grade or recovery rates from those assumed in mining plans; (v) community relations; (vi) conflict resolution and outcome of projects or oppositions; (vii) litigation, political, regulatory, labor and environmental risks; (viii) exploration risks and results, including that mineral resources are not mineral reserves, they do not have demonstrated economic viability and there is no certainty that they can be upgraded to mineral reserves through continued exploration; (ix) the failure of counterparties to perform their obligations under hedging instruments; (x) we take a material impairment charge on our Nevada operations; and (xi) we are unable to remain in compliance with all terms of the credit agreement in order to maintain continued access to the revolver. For a more detailed discussion of such risks and other factors, see the Company's 2021 Form 10-K, filed on February 22, 2022, with the Securities and Exchange Commission (SEC), as well as the Company's other SEC filings. The Company does not undertake any obligation to release publicly, revisions to any "forward-looking statement," including, without limitation, outlook, to reflect events or circumstances after the date of this presentation, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws. Investors should not assume that any lack of update to a previously issued "forward-looking statement" constitutes a reaffirmation of that statement. Continued reliance on "forward-looking statements" is at investors' own risk.

NYSE: HL RESPONSIBLE, SAFE, INNOVATIVE, | 2

CAUTIONARY STATEMENTS (cont'd)

Cautionary Note Regarding Reserves and Resources

This presentation uses the terms "mineral resources," "measured mineral resources," "indicated mineral resources" and "inferred mineral resources." Mineral resources that are not mineral reserves do not have demonstrated economic viability. You should not assume that all or any part of measured or indicated mineral resources will ever be converted into mineral reserves. Further, inferred mineral resources have a great amount of uncertainty as to their existence and as to whether they can be mined legally or economically, and an inferred mineral resource may not be considered when assessing the economic viability of a mining project, and may not be converted to a mineral reserve. On October 31, 2018, the SEC adopted new mining disclosure rules ("S-K 1300") that is more closely aligned with current industry and global regulatory practices and standards, including National Instrument 43-101 – Standards of Disclosure for Mineral Projects ("NI 43-101") which we comply with because we also are a "reporting issuer" under Canadian securities laws. While S-K 1300 is more closely aligned with NI 43-101 than the prior SEC mining disclosure rules, there are some differences. NI 43-101 is a rule developed by the Canadian Securities Administrators, which established standards for all public disclosure an issuer makes of scientific and technical information concerning mineral projects. Unless otherwise indicated, all resource and reserve estimates contained in this presentation have been prepared in accordance with NI 43-101, as well as S-K 1300. Investors are urged to consider closely the disclosure in the Company's Annual Report on Form 10-K for the year ended December 31, 2021 available at www.sec.gov.

Qualified Person (QP)

Kurt D. Allen, MSc., CPG, Vice President - Exploration of Hecla Mining Company and Keith Blair, MSc., CPG, Chief Geologist of Hecla Limited, who serve as a Qualified Person under S-K 1300 and "NI 43-101", supervised the preparation of the scientific and technical information concerning Hecla's mineral projects in this presentation. Technical Report Summaries for each of the Company's material properties are filed as exhibits 96.1, 96.2 and 96.3 to the Company's Annual Report on Form 10-K for the year ended December 31, 2021 and are available at www.sec.gov. Information regarding data verification, surveys and investigations, quality assurance program and quality control measures and a summary of analytical or testing procedures for the Greens Creek Mine are contained in a technical report titled "Technical Report for the Greens Creek Mine" effective date December 31, 2018, and for the Lucky Friday Mine are contained in a technical report for the Lucky Friday Mine Shoshone County, Idaho, USA" effective date April 2, 2014, for Casa Berardi are contained in a technical report titled "Technical Report on the mineral resource and mineral reserve estimate for Casa Berardi Mine, Northwestern Quebec, Canada" effective date December 31, 2018 (the "Casa Berardi Technical Report"), and for the San Sebastian Mine, Mexico, are contained in a technical report prepared for Hecla titled "Technical Report for the San Sebastian Ag-Au Property, Durango, Mexico" effective date September 8, 2015. Also included in these three technical reports is a description of the key assumptions, parameters and methods used to estimate mineral reserves and resources and a general discussion of the extent to which the estimates may be affected by any known environmental, permitting, legal, title, taxation, sociopolitical, marketing, or other relevant factors. Information regarding data verification, surveys and investigations, quality assurance program and quality control measures and a summary of sample, analytical or testing procedures for the

Cautionary Note Regarding Non-GAAP measures

Cash cost per ounce of silver and gold, after by-product credits, EBITDA, adjusted EBITDA, AISC, after by-product credits, realized silver margin, and free cash flow represent non-U.S. Generally Accepted Accounting Principles (GAAP) measurements. A reconciliation of these non-GAAP measures to the most comparable GAAP measurements can be found in the Appendix.

NYSE: HL RESPONSIBLE, SAFE, INNOVATIVE, | 3

2021: RECORD REVENUES, 2nd HIGHEST SILVER RESERVES

- Silver is key to clean and green energy transition
- 2021E silver demand of 1.29 billion oz* with photovoltaic demand estimated to rise 13% to 110 Moz

Largest U.S. Silver Producer

- Hecla produces >40% of U.S. silver
- · Largest silver reserve base in the U.S. with 200 Moz in silver reserves
- Technical reports confirm strong reserve economics and long mine lives

ESG Focus

- Strong safety performance, All-Injury Frequency Rate of 1.45, 40% lower than U.S. average
- Net neutral on scope 1 & 2 emissions

Record Year

- Developed **Underhand Closed** Bench (UCB) mining method at Lucky Friday
- 2nd highest silver and gold reserves
- · Record revenues. Adjusted EBITDA, 2nd highest cash flows from operations and free cash flow

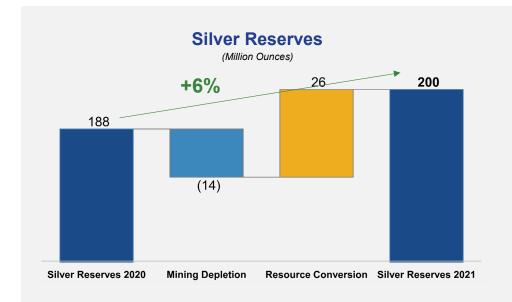

RESERVES: 2021 vs. 2020

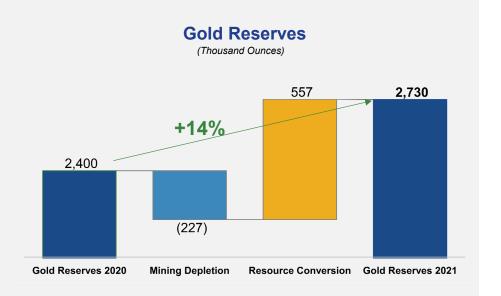

Heela MINING COMPANY Largest U.S. Silver Producer

2nd highest silver and gold reserves, mining depletion replaced by increased reserves

- Greens Creek silver reserves up +12%, second highest since 2002
- Company wide measured & indicated resources declined due to conversion to reserves
- Inferred resources increased 8% for silver, 2% for gold
- Reserve prices: Gold \$1,600/oz, Silver \$17/oz

NYSE: HL RESPONSIBLE. SAFE. INNOVATIVE. | 5

WHY INVEST IN HECLA?

Primary U.S. Based Operations

- Right jurisdiction for risk and ESG
- Net neutral in scope 1 & 2 emissions

Highest grade silver miner with largest U.S. reserves

- Long lived mines with decades ahead of us
- Produce >40% silver mined in the U.S.
- Generated cumulatively >\$200 million in free cash flow in 2020 & 2021

Silver production is growing

- 2022E silver production from Lucky Friday is 20% higher than 2021, 111% higher than 2020
- Exploration resulted in 2nd highest reserves

Only silverlinked dividend policy

- · Paying dividends for a decade
- Dividends were 19% of 2021 free cash flow

Brand Value

130 years old and 55 years on NYSE

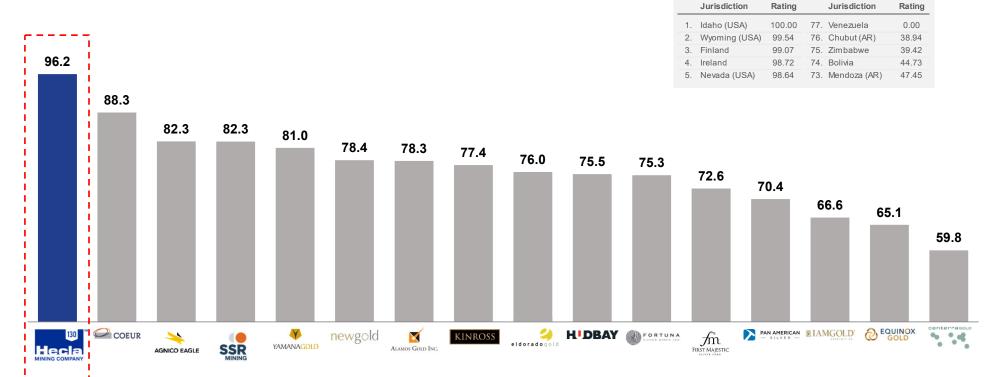

LOW POLITICAL RISK

U.S. and Canada focus results in one of the safest operating jurisdictions

Geographic Risk Profile⁽¹⁾

2020 Fraser Institute Policy Perception Index | Operating Assets Only

Source: Fraser Institute and Wall Street research

Policy Perception Index: Measures

executives

Most Attractive

based on the opinions of managers and

attractiveness of mining policies in a jurisdiction

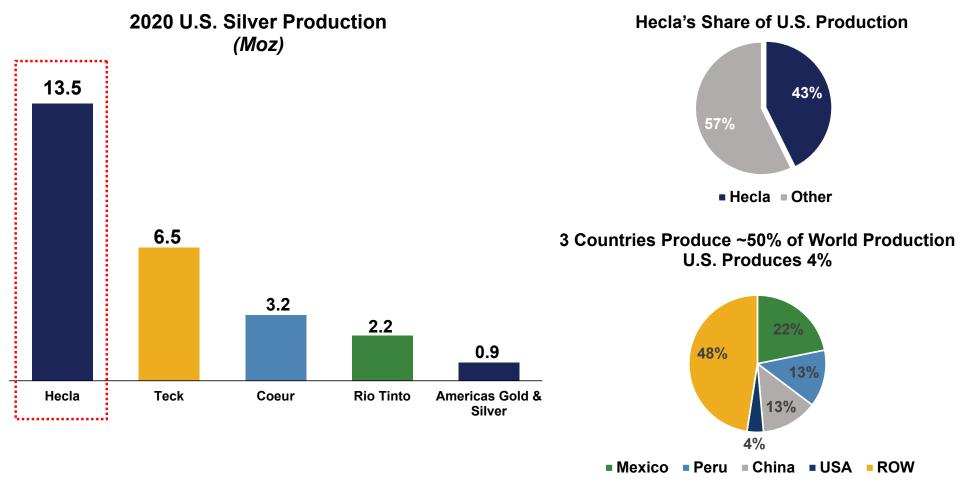

Least Attractive

⁽¹⁾ Calculated as the weighted average of each company's geographic revenue distribution and the respective 2020 Fraser Institute Policy Perception Index (PPI) value for each region. Calculation excludes geographic revenue distribution from countries without PPI scores (China, Greece, Philippines, Switzerland, Singapore, Germany and others).

HECLA MINES >40% OF ALL SILVER PRODUCED IN THE USA

Half of the world's production is from Mexico, Peru and China; U.S. production is scarce

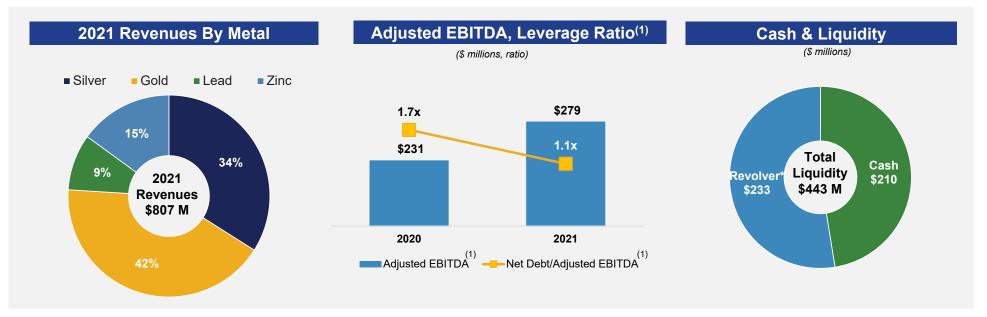

NYSE: HL Source: Silver Institute; Company Reports RESPONSIBLE. SAFE. INNOVATIVE. | 8

FINANCIAL STRENGTH AND FLEXIBILITY

Solid operational performance delivers strong balance sheet

- Record revenues of \$807 million, +16% over 2020
- Record adjusted EBITDA of \$279 million, +20% over 2020; net debt to adjusted EBITDA ratio of 1.1x, well below the 2.0x target⁽¹⁾
- Cash flow from operations \$221 million, free cash flow of \$111 million, +23% over 2020
- Cash and equivalents of \$210 million, Liquidity of \$443 million*

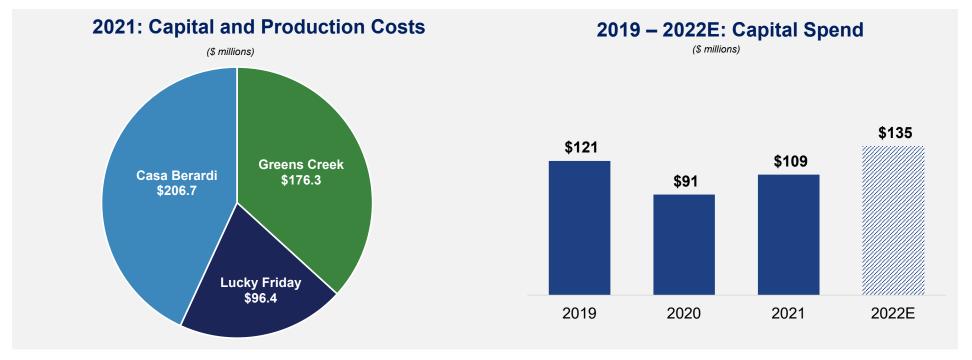

CAPITAL AND PRODUCTION COSTS ARE STABLE

Impact from inflation is relatively low due to low tonnage, high-grade mines

- Increase in silver production not tied to any significant increase in capital
- No significant increase in planned production costs in 2022
- Stable capital costs with no planned large construction projects

NYSE: HL

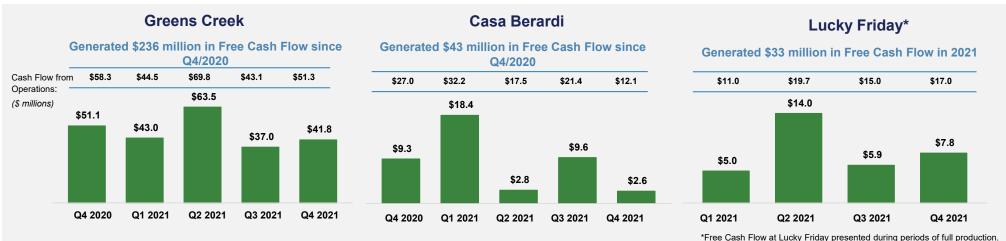

RESPONSIBLE, SAFE, INNOVATIVE. | 10

STRONG FREE CASH FLOW GENERATION

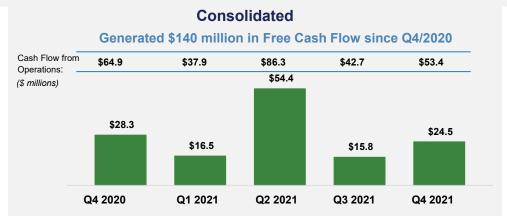

NYSE: HL

Positive free cash flow generation from all mines over last five quarters⁽²⁾

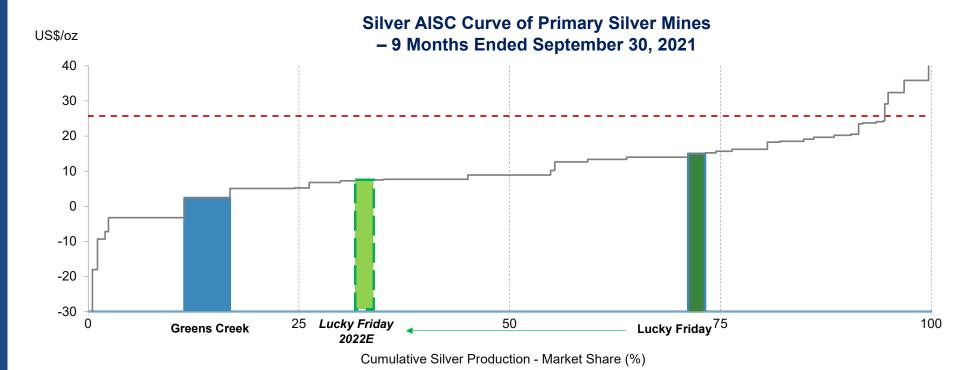

Refer to 'Endnotes' slide for definitions and footnotes. RESPONSIBLE. SAFE. INNOVATIVE. | 11

LOW-COST PROFILE OF SILVER ASSETS

Greens Creek in the top 15th percentile, Lucky Friday expected to be in top 33rd percentile of primary silver mines

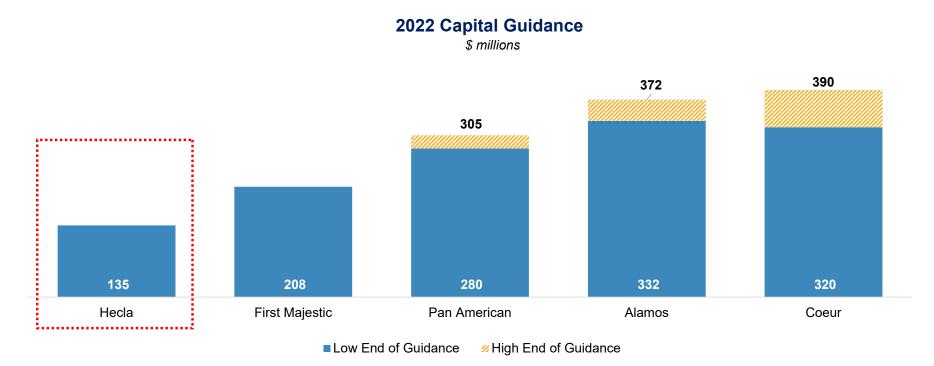

- Greens Creek's low-cost structure reflected by its position in the top 15th percentile of AISC of primary silver mines
- Expected production increases at Lucky Friday to improve its position to the top 33rd percentile in 2022

Source: Metals Focus Silver Mine Cost Service

LOW-CAPITAL PROFILE

Organic growth in production at no significant increase to capital spend

- Lucky Friday's production increase with no anticipated large capital outlays
- No major construction capital on the horizon

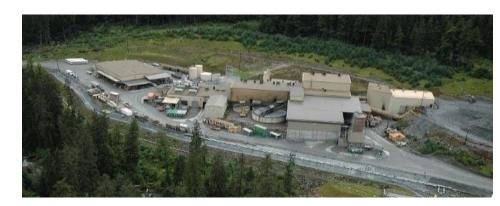

NYSE: HL Source: Company Filings RESPONSIBLE. SAFE. INNOVATIVE. | 13

GREENS CREEK: ANOTHER SOLID YEAR

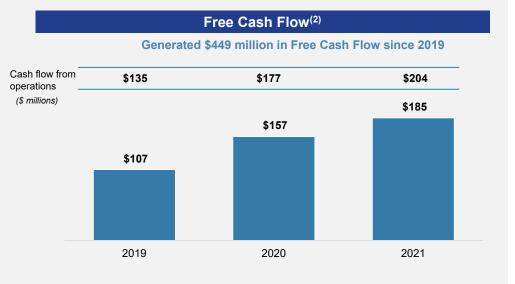

Consistent performance, low costs drive free cash flow generation at all silver prices

- Solid finish to 2021, production met guidance, costs beat guidance - 9.2 Moz silver produced
 - Cost of sales \$216 million
 - Cash costs per silver oz, after by-product credits, (\$0.65)
 - AISC per silver oz, after by-product credits, \$3.19
- 12% increase in reserves to 125 Moz, 14-year reserve plan

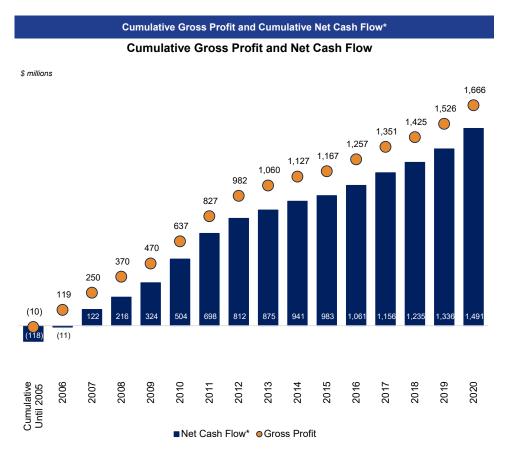

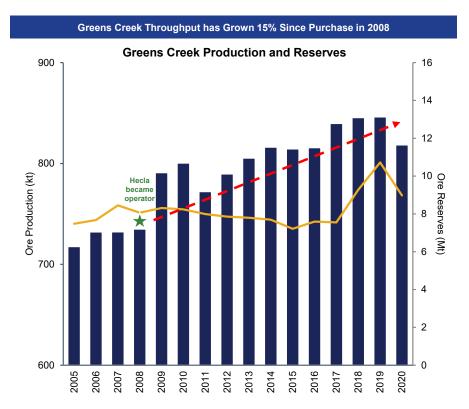

RESPONSIBLE. SAFE. INNOVATIVE. | 14

HECLA'S FLAGSHIP ASSET - GREENS CREEK IS A TIER 1 ASSET

2021: 9.2 Moz silver production, \$209 M cash flow, \$185 M free cash flow**

- Automation drive commenced in 2017 resulting in further efficiencies
- Consistent exploration success maintains stable reserve base

^{*}Net cash flow is a non-GAAP measure and reconciliation to Gross Profit (GAAP) is shown in the Appendix. **Free Cash Flow is \$182.6M of cash flow from operations less \$23M of capital spend.

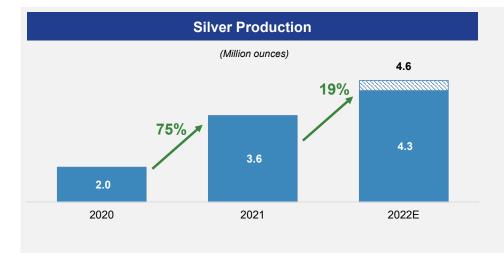

LUCKY FRIDAY ON TRACK TO BE 5 Moz/YR PRODUCER

Underhand Closed Bench (UCB) mining method expected to improve safety, tonnage and production

- UCB method's success with higher grades mined at depth position Lucky Friday to be a flagship asset for the next decade
- 2022E production 1.2x 2021, 2.2x 2020, declining per ounce costs
- 2021 Reserves of 75 Moz, 17-year reserve plan

* Cash Cost and All-in sustaining cost (AISC) is a non-GAAP measure, reconciliation to GAAP is shown in appendix. NYSE: HL

** Cash costs and AISC per ounce for 2022 are mid points of lower and upper range of guidance

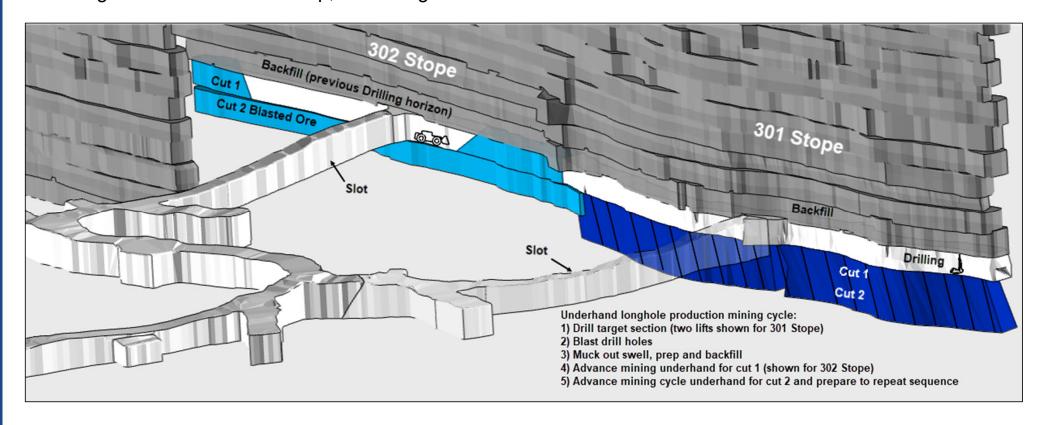

RESPONSIBLE, SAFE, INNOVATIVE, | 16

UCB MINING METHOD

Isometric view showing two of the four UCB stopes that produce the 30 Vein

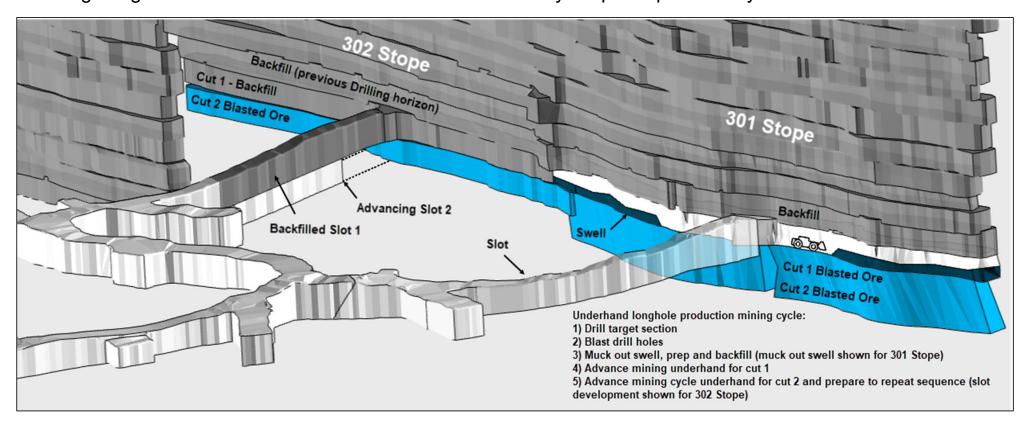

- Large scale blasting proactively manages seismic risk miners work inside the de-stressed zone.
- Mining front advances down-dip, under engineered backfill.

UCB MINING METHOD

Same stopes, two weeks later

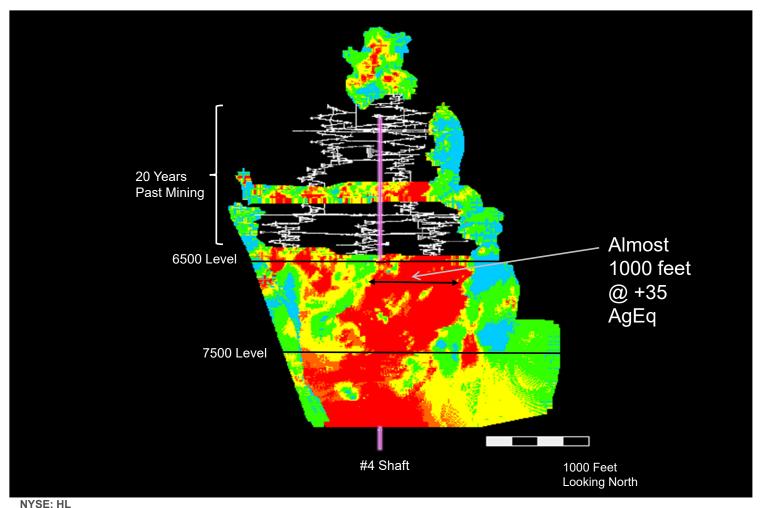

- Dilution is controlled by bolting the ribs as mining advances along strike and down dip.
- High degree of mechanization and reduced seismic delays improve productivity.

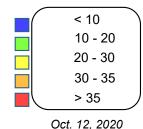

LUCKY FRIDAY ON TRACK TO BE 5 Moz PER YEAR PRODUCER

Higher grades at depth are supported by success of UCB mining method

30 Vein - *AgEq Grade (opt)

*Ag Equivalent Values Based on metal prices of \$16.50/oz Ag, \$0.85/lb Pb, and \$1.00/lb Zn ** Cutoff grade 11 AgEq *** 2020 average grade 25 AgEg

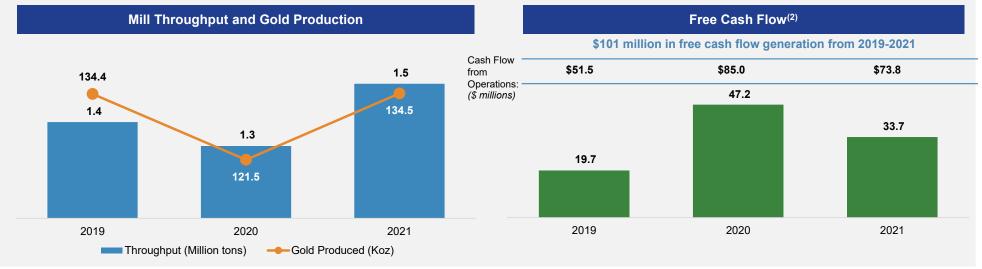

CASA BERARDI: STRONG PRODUCTION PERFORMANCE IN 2021

Production optimization focus delivered results, 16% increase in gold reserves

- Mill achieved record throughput at 4,187 tpd; Mill recoveries +4%
- 2021: 134.5 Koz gold produced
 - Cost of sales \$230 million
 - Cash costs per gold oz, after by-product credits, \$1,125
 - AISC per gold oz, after by-product credits, \$1,399
- Gold reserves at 1.8 Moz, 14-year reserve plan

CASA BERARDI: FOCUSED ON LONG-TERM OPERATIONAL IMPROVEMENT

Investments are yielding results

Mill performance is consistent with >approximately 90% availability

~10% increase in UG active time, leading to improved productivity

Reduced UG maintenance backlog by 2.5 weeks, translates to higher equipment availability

Launched training for UG operators to improve pre/post-op (equipment reliability)

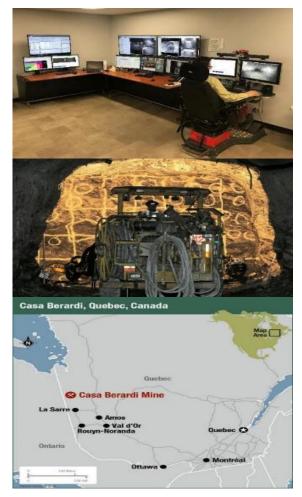

Increased operator accountability to decrease operator driven downtime

Working on implementing reduction in Support Costs

Open Pits and Explosives RFP process well underway → paves way to reduced external spend

NYSE: HL

SILVER RESERVES (contained ounces of silver)

Hecla's silver reserves continue to increase while world reserves react to current metal prices

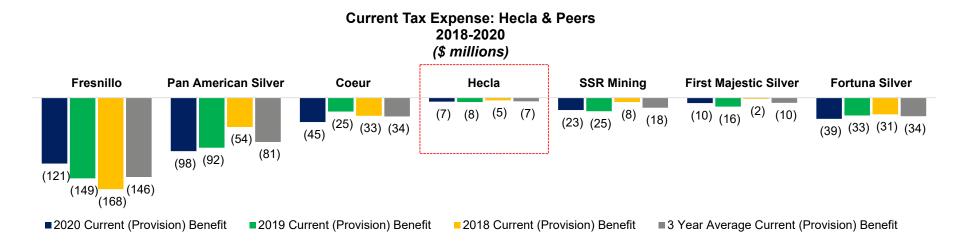

Source: Bloomberg

HECLA'S TAX CHARACTERISTICS ARE NOT RECOGNIZED

Tax expense and paid taxes amongst the lowest and an unrecognized tax asset

- Hecla has a \$759 million tax loss carryforward to reduce future U.S. taxable income
 - \$53 million in Canada
- U.S. tax incentives for U.S. mines
 - Depletion deductions
 - Research and development credits
 - Mine safety training credits
 - Accelerated depreciation

NYSE: HL

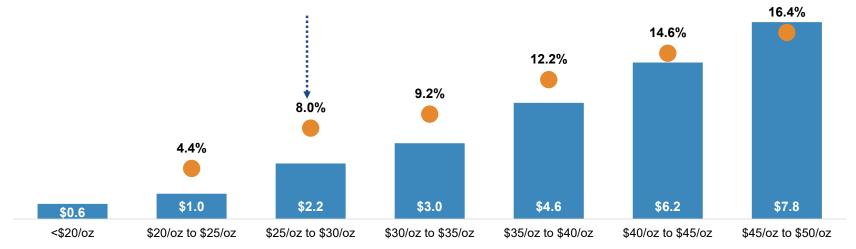

LEADING DIVIDEND POLICY IS IMPROVED FURTHER

More cash returned to shareholders as dividend yield increases synchronously with silver prices MINING COM

Industry's only silver-linked dividend policy that pays an annual normal dividend (\$0.015 per share) plus a silver price-linked dividend that commences at \$20/oz silver price.

At \$25/oz realized price, an implied dividend yield of 8.0% of silver price

■ Dividends Paid per Silver Ounce Produced - \$/oz*

Dividend Yield as a % of Silver Price**

^{*} Assumes 13.5 million ounces of silver production

A VERY SHORT HISTORY ON SILVER DEMAND

Despite declining photography demand, silver industrial and investment demand has been in a secular bull market since 2000 and is stronger in 2021 and the future

Five distinct periods of silver demand, three that are strengthening

- Monetary by governments (2000 BC to 1800 AD)
- Photographic (1900 to 1999)
- Industrial (1940)
- Investment (2000)
- Energy (2010)

20 YEAR CHANGE IN DEMAND

Million Ounces

| | 1999 | 2020 | % Increase | |
|---------------------|------|-------|------------|---|
| Industrial | 343 | 487 | 42% | _ |
| Photography | 246 | 28 | -89% | |
| Jewelery/Silverware | 260 | 181 | -31% | |
| Investment | 26 | 532 | 1,946% | |
| Total | 875 | 1,033 | 18% | |

If the decrease in photographic demand is removed, silver demand increases 441 million ounces or 61%

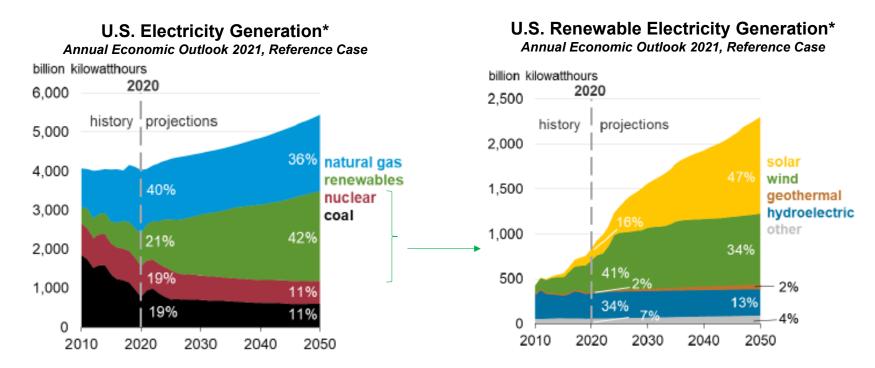

Source - World Silver Survey 2021

RENEWABLE ENERGY GAINS MOMENTUM – SOLAR PROJECTED FOR THE LARGEST GROWTH

Global policies are favoring renewable energy

- In the U.S., renewable energy projected to double from 21% in 2020 to 42% by 2050
- Solar energy generation as a percentage of renewable energy forecast to increase 3x by 2050 from 16% to 47%

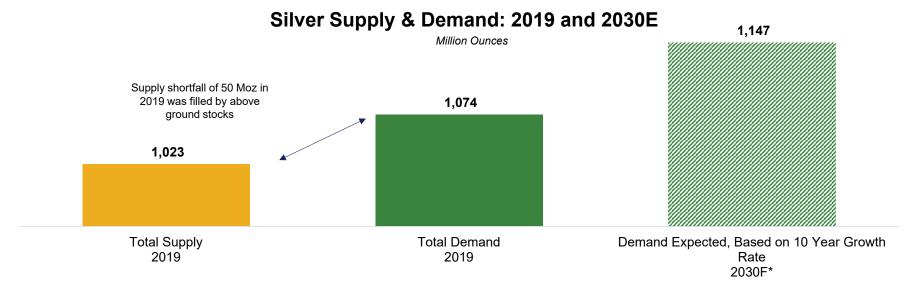

^{*} Source – U.S. Energy Information Administration (EIA), Annual Energy Outlook 2021 narrative, February 2021.

SILVER – WIDENING GAP BETWEEN SUPPLY & DEMAND

Gap expected to increase even if industrial demand growth is only 2%

- 2019 saw a total supply of 1,023 Moz and total demand of 1,074 Moz
- Silver's total demand in 2030 is expected to reach ~1,147 Moz if demand stays on the last decade trend and no increase due to additional solar or investment demand
- Supply needs to grow by ~70 Moz per year by 2030 with only 2% demand growth

^{*} Demand assumptions: CAGR for industrial demand over the past 10 years has been 2.0%. Assume no increase or decrease in investment, jewelry or silverware demand.

WHY INVEST IN HECLA?

The largest U.S. silver producer with the largest U.S. reserve base with high margin best in class silver assets

We mine:

The Right Metals

- Silver is the right metal for a renewable energy future
- Produce 40% of silver mined in the U.S.
- Have the largest U.S. silver reserve base

In the Right Jurisdictions

- Mines located in the right geographical addresses with low risk
- For investment attractiveness, Hecla operates in 3 of the top 10 regions globally: Alaska 5, Quebec 6, Idaho 9*

With the Right Mines

- · Long-lived mines with decades ahead of us
- Mines have the highest reserve grades, long mine lives and are low cost

* Source: Fraser Institute Survey 2020

SILVER SUPPLY COMES FROM MINE PRODUCTION & RECYCLING

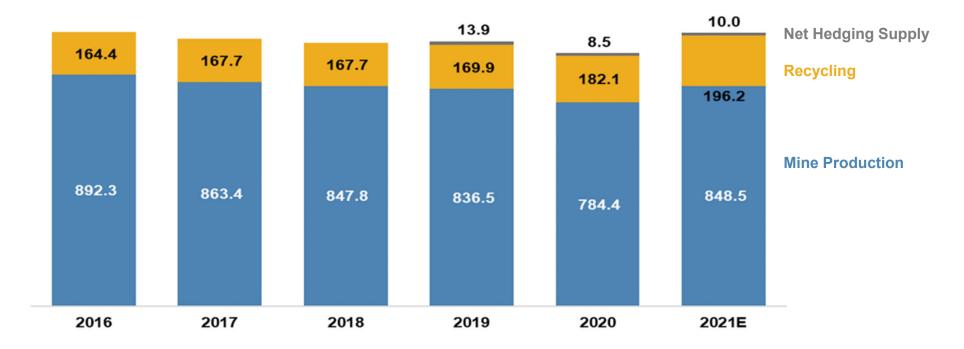

Significant disruptions occurred in mine supply in 2020

Mine production accounts for 80-85% of total silver supply

- 2019 saw lower mine production due to grade declines and temporary mine suspensions due to community action
- Greater challenges occurred in 2020 due to COVID-19 that resulted in disruptions in production.

SILVER DEMAND HAS THREE MAIN COMPONENTS

Green energy demand is new and growing

* Industrial demand includes photography demand Source: World Silver Survey 2020

NYSE: HL Source: Bloomberg, Metals Focus RESPONSIBLE. SAFE. INNOVATIVE. | 53

AMERICA NEEDS TO PRODUCE THE METALS AT HOME

If Copper is the "new oil" - Silver is like the spark

- Biden Administration's Build Back Better counts on a shorter supply chain
- The metals Hecla produces are the foundation of a low carbon future
- Silver, copper, and other metals are essential for wind, solar, batteries, and electric vehicles
- Hecla is the largest U.S. silver producer and owns the world's third largest undeveloped copper deposit

Appendix

ENDNOTES

- 1. Net debt to adjusted EBITDA is a non-GAAP measurement, a reconciliation of adjusted EBITDA and net debt to the closest GAAP measurements of net income (loss) and debt can be found in the appendix. It is an important measure for management to measure relative indebtedness and the ability to service the debt relative to its peers. It is calculated as total debt outstanding less total cash on hand divided by adjusted EBITDA.
- 2. Free cash flow is a non-GAAP measure and is calculated as cash flow from operations less additions to property, plant and equipment. Reconciliation to GAAP is shown in the appendix.
- 3. Realized silver margin is a non-GAAP measure and is calculated as realized market price of silver less AISC.
- 4. All-in sustaining cost (AISC), after by-product credits, is a non-GAAP measurement, a reconciliation of which to cost of sales and other direct production costs and depreciation, depletion and amortization, the closest GAAP measurement, can be found in the appendix. AISC, after by-product credits, includes cost of sales and other direct production costs, expenses for reclamation and exploration, and sustaining capital costs at the mine sites. AISC, after by-product credits, for our consolidated silver properties also includes corporate costs for all general and administrative expenses, exploration and sustaining capital which support the operating properties. AISC, after by-product credits, is calculated net of depreciation, depletion, and amortization and by-product credits. Current GAAP measures used in the mining industry, such as cost of goods sold, do not capture all the expenditures incurred to discover, develop and sustain silver and gold production. Management believes that all in sustaining costs is a non-GAAP measure that provides additional information to management, investors and analysts to help in the understanding of the economics of our operations and performance compared to other producers and in the investor's visibility by better defining the total costs associated with production. Similarly, the statistic is useful in identifying acquisition and investment opportunities as it provides a common tool for measuring the financial performance of other mines with varying geologic, metallurgical and operating characteristics. In addition, the Company may use it when formulating performance goals and targets under its incentive program.
- 5. Cash cost, after by-product credits, per silver and gold ounce represents a non-GAAP measurement, a reconciliation of which to cost of sales and other direct production costs and depreciation, depletion and amortization (sometimes referred to as "cost of sales" in this release), can be found in the Appendix. It is an important operating statistic that management utilizes to measure each mine's operating performance. It also allows the benchmarking of performance of each mine versus those of our competitors. As a primary U.S. silver mining company, management also uses the statistic on an aggregate basis aggregating the Greens Creek, Lucky Friday and San Sebastian mines to compare performance with that of other primary silver mining companies. With regard to Casa Berardi and Nevada Operations, management uses cash cost, after by- product credits, per gold ounce to compare its performance with other gold mines. Similarly, the statistic is useful in identifying acquisition and investment opportunities as it provides a common tool for measuring the financial performance of other mines with varying geologic, metallurgical and operating characteristics. In addition, the Company may use it when formulating performance goals and targets under its incentive program.
- 6. Silver and gold equivalent (include zinc and lead production) is calculated using the average market prices for the time period noted.
- 7. Cost of sales and other direct production costs and depreciation, depletion and amortization.
- 8. 2022E refers to Hecla's estimates for 2022. Calculations for 2022 include silver, gold, lead and zinc production from Greens Creek, Lucky Friday and Casa Berardi Operations converted using \$1,700 gold, \$22 silver, \$1.00 lead, and \$1.50 zinc.

ESG

ESG: SMALL FOOTPRINT, LARGE BENEFIT

Environment, Community and Safety are three pillars of our ESG program

Safety

- · Well-established safety culture
- Casa Berardi awarded the John T. Ryan Safety Award***
- · Focus on safe and efficient management of COVID-19
- · Safety of our people is foundational to running our business

Small Environment Footprint

- Net neutral on emissions in 2021*
- Global footprint <3,900 acres
- Low energy use and GHG emissions
- Produced 473 AgEq oz./tonne of GHG emission vs. peers** at 200 AgEq oz./tonne
- Low water use of 63 gal. per ounce produced vs. an average person/day (100 gal.)
- Focus on reclamation of Troy tailings (300 acres)

Large Community Benefit

- Support >2,300 families
- Typically, largest employer and taxpayer in areas we operate
- Provide community support through multiple programs
- Hecla Charitable Foundation
- Alaska Chamber's Large Business of the Year in 2021

Hecla is mining metals for a renewable energy future

- Silver and copper are the essential metals for a renewable energy future
- The U.S. imports 60% of silver and 30% of copper needs
- Hecla produces >40% of U.S. silver and is the largest U.S. silver producer with the largest U.S. silver reserve base
- Our Montana assets are the third largest undeveloped copper deposit in the world, host >2.5 billion pounds of copper and >300 million ounces of silver in inferred resources

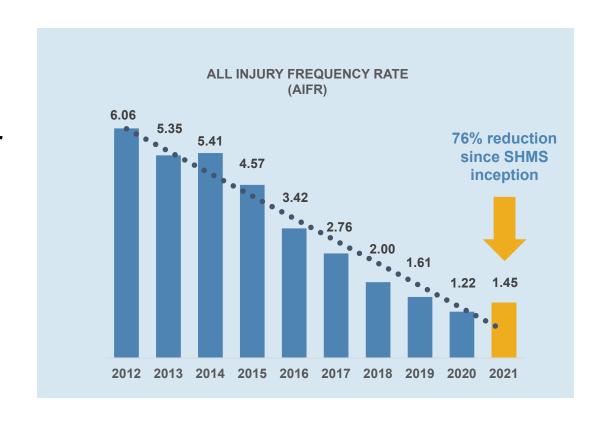

^{*} On scope 1 & 2 emissions, and through the purchase of carbon offset credits

HECLA IS AMONG THE SAFEST OF MINING COMPANIES

Hecla's commitment and NMA CORESafety started in 2012, moved from underperformance to industry leader

- Reduced AIFR by 24%, the lowest in company history
- Reduced AIFR by 76% since 2012
- Hecla 1.22 rate in 2020 nearly 50% better than national average of 2.40
- Aggressive health and safety protocols even before COVID-19 was deemed a pandemic
- Have more than a 90+% vaccination rate at Greens Creek

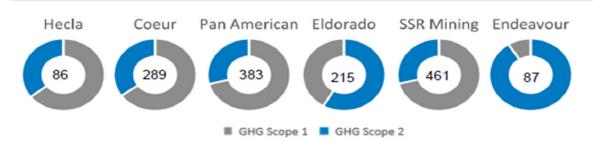

GREEN HOUSE GAS INTENSITY

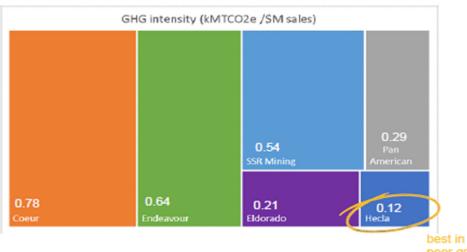

Hecla's Scope 1 and 2 emissions are among the lowest in the industry

Hecla produced 157 silver ounces per tonne of GHG, 473 silver-equivalent ounces per tonne of GHG, or 6.8 gold equivalent ounces per tonne of GHG

SCOPE 1 AND 2 GHG EMISSIONS IN 2020 (in Thousands MtCO2e)

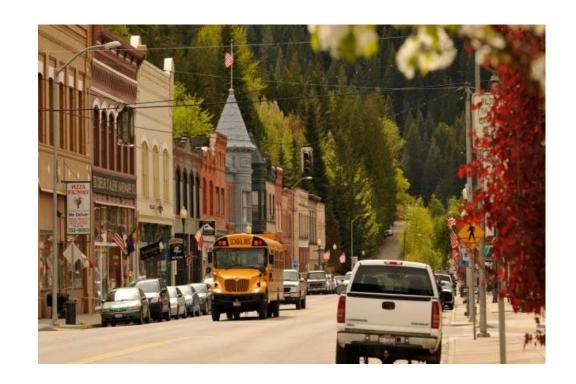

peer group

HECLA PROVIDES OVERSIZED BENEFITS

Contributions to our world, country, communities and employees

- Metals America needs
 - · Silver, copper, zinc, lead, gold
- Embrace families
 - Good paying jobs and "uncommon" benefits
 - Multi-generations work for the company
 - Active community partner
- Develop innovations
 - Dry-stack tailings
 - New technology that makes workers safe, more productive
- Support communities
 - Taxes, economic impact, social engagement
 - First Nations/Native Americans
 - Hecla Charitable Foundation
- Protect the environment

HECLA CHANGES LIVES

Largest employer with jobs and benefits that last a lifetime and an active participant in the local communities

- Direct economic impact of \$550+ million annually in 3 small communities
- More than a living wage longevity, benefits
- Each Hecla job creates more jobs 3,000+
- Support for communities during COVID-19:
 - \$150,000 of food, personal protective equipment, supplies, and financial assistance
 - \$150,000 worth of "Hecla Bucks" for Hecla employees use at local businesses
- Hecla Charitable Foundation has provided \$3+ million to area non-profits
- First Nation/Native Americans are key beneficiaries

INNOVATION THAT IMPROVES MINES AND SOCIETY

Led the way in dry-stack tailings development, tier IV engines improved air quality for all, and better, safer jobs

- Pioneered dry-stack tailings management at Greens Creek is industry "best practice" today
- Hecla established an internal tailings standard in 2014 and continues to improve our management systems
- Engines developed for underground mines have made air quality better for all
- Remote and automated machines put workers out of harms way and eliminate repetitive work

ENVIRONMENTAL STEWARDSHIP FROM BEGINNING TO END

Troy tailings reclamation considered "gold standard" in Montana

- Troy Tailings Storage Facility reclamation completed (300 acres). Nearly \$8 million in financial assurance released by the state
 - More than 200,000 shrubs and trees planted at Troy; land returned to productive wildlife habitat
 - Native plant collection and planting in partnership with Kootenai-Salish Tribes
 - Reclamation and biodiversity efforts can also help sequester carbon
- Backfilling the San Sebastian pits
- Closure of older Lucky Friday tailings dams

Operations/Exploration/Pre-development

OPERATIONAL REVIEW

Continued performance despite COVID-19 challenges

AURORA, CREEDE, AND REPUBLIC - ADVANCING HISTORIC MINING DISTRICTS

2022 exploration drilling marks first drilling activities in many years

MONTANA ASSETS

Working to advance underground data collection and permitting

Permitting Strategy - Taking a reset

- Executing strategy to expedite authorization for underground evaluation and data collection via existing infrastructure.
 - Focus on permitting additional underground evaluation work on private land at existing Montanore site.
 - Proposed evaluation project has very low environmental impact.
- Common ownership of both ore bodies provides optionality not available to previous proponents.

GREENS CREEK: OVER 30 YEARS AND STILL EXPLORING AND ADDING RESERVES

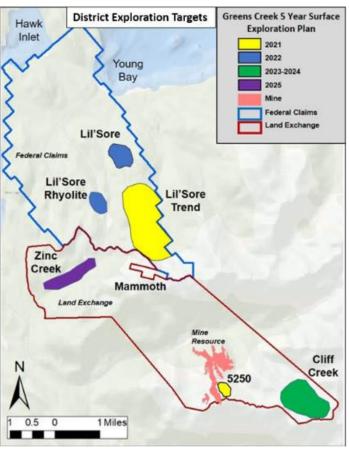

From 1989 to 2020, Greens Creek has mined 20 million tons containing:

- 322m ounces of silver
- 2.7m ounces of gold
- 4b pounds of zinc
- 1.5b pounds of lead

GREENS CREEK – DISTRICT AND NEAR MINE GROWTH POTENTIAL

HECE MINING COMPANY Largest U.S. Silver Producer

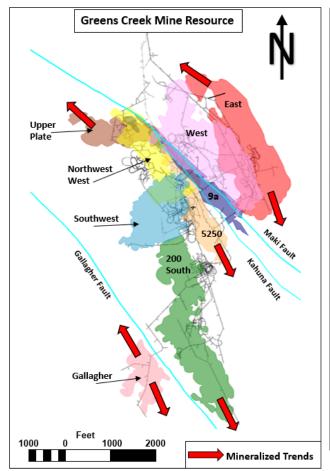

In-mine mineralization open for expansion and district potential for new deposits

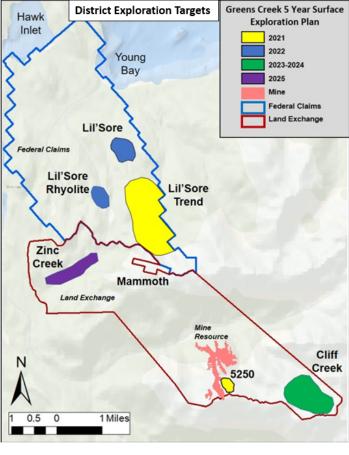

Continuation of resource expansion along mineralized trends

- Ore tons have doubled in the past 15 years
- Pace is driven by development access
- 5250 exploration is accessed from surface
- Multiple years of exploration planned

District targets have potential for a new deposit

- VMS deposits often are in clusters
- Multiple untested mineralized targets

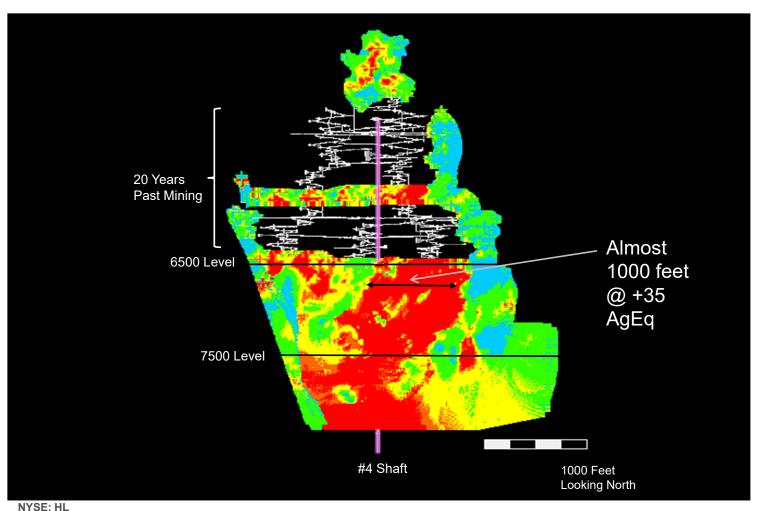

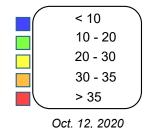

LUCKY FRIDAY ON TRACK TO BE 5 Moz/YR PRODUCER

^{1.} Includes all direct and indirect operating costs related directly to the physical activities of producing metals, including mining, processing and other plant costs, third-party refining and marketing expense, on-site general and administrative costs, and royalties, after by-product revenues earned from all metals other than the primary metal produced at each unit. AISC, Before By-product Credits also includes on-site exploration, reclamation, and sustaining capital cost.

PROVEN & PROBABLE MINERAL RESERVES(1)

(On December 31, 2021 unless otherwise noted)

⁽¹⁾ The term "reserve" means an estimate of tonnage and grade or quality of indicated and measured mineral resources that, in the opinion of the qualified person, can be the basis of an economically viable project.

More specifically, it is the economically mineable part of a measured or indicated mineral resource, which includes diluting materials and allowances for losses that may occur when the material is mined or extracted.

The term "proven reserves" means the economically mineable part of a measured mineral resource and can only result from conversion of a measured mineral resource. See footnotes 7 and 8 below.

Totals may not represent the sum of parts due to rounding.

All estimates are in-situ except for the proven reserves at Greens Creek which are in surface stockpiles.

⁽²⁾ Mineral reserves are based on \$17/oz silver, \$1600/oz gold, \$0.90/lb lead, \$1.15/lb zinc, unless otherwise stated.

⁽³⁾ The reserve NSR cut-off grades for Greens Creek are \$215/ton for all zones at Greens Creek except the Gallagher Zone at \$220/ton; metallurgical recoveries (actual 2021): 81% for silver, 72% for gold, 82% for lead, and 90% for zinc

⁽⁴⁾ The reserve NSR cut-off grades for Lucky Friday are \$216.19 for the 30 Vein and \$230.98 for the Intermediate Veins; metallurgical recoveries (actual 2021); 95% for silver, 95% for lead, and 90% for zinc

⁽⁵⁾ The average reserve cut-off grades at Casa Berardi are 0.101 oz/ton gold underground and 0.037 oz/ton gold for open pit. Metallurgical recovery (actual 2021): 85% for gold; US\$/CAN\$ exchange rate: 1:1.275.

⁽⁹⁾ The term "probable reserves" means the economically mineable part of an indicated and, in some cases, a measured mineral resource. See footnotes 8 and 9 below.

Totals may not represent the sum of parts due to rounding

All estimates are in-situ. Mineral resources are exclusive of reserves.

MINERAL RESOURCES FOOTNOTES

- The term "mineral resources" means a concentration or occurrence of material of economic interest in or on the Earth's crust in such form, grade or quality, and quantity that there are reasonable prospects for economic extraction.

 A mineral resource is a reasonable estimate of mineralization, taking into account relevant factors such as cut-off grade, likely mining dimensions, location or continuity, that, with the assumed and justifiable technical and economic conditions, is likely to, in whole or in part, become economically extractable. It is not merely an inventory of all mineralization drilled or sampled.
- The term "measured resources" means that part of a mineral resource for which quantity and grade or quality are estimated on the basis of conclusive geological evidence and sampling. The level of geological certainty associated with a measured mineral resource is sufficient to allow a qualified person to apply modifying factors, as defined in this section, in sufficient detail to support detailed mine planning and final evaluation of the economic viability of the deposit.

 Because a measured mineral resource has a higher level of confidence than the level of confidence of either an indicated mineral resource or an inferred mineral resource, a measured mineral resource may be converted to a proven mineral resource to a probable mineral resource.
- (9) The term "indicated resources" means that part of a mineral resource for which quantity and grade or quality are estimated on the basis of adequate geological evidence and sampling. The level of geological certainty associated with a indicated mineral resource is sufficient to allow a qualified person to apply modifying factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Because an indicated mineral resource has a lower level of confidence than the level of confidence of a measured mineral resource, an indicated mineral resource may only be converted to a probable mineral reserve.
- The term "inferred resources" means that part of a mineral resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. The level of geological uncertainty associated with an inferred mineral resource is too high to apply relevant technical and economic factors likely to influence the prospects of economic extraction in a manner useful for evaluation of economic viability. Because an inferred mineral resource has the lowest level of geological confidence of all mineral resources, which prevents the application of the modifying factors in a manner useful for evaluation of economic viability, an inferred mineral resource may not be considered when assessing the economic viability of a mining project, and may not be converted to a mineral reserve.
- (11) Mineral resources are based on \$1700/oz gold, \$21/oz silver, \$1.15/lb lead, \$1.35/lb zinc and \$3.00/lb copper, unless otherwise stated.
- 112 The resource NSR cut-off grades for Greens Creek are \$215/ton for all zones at Greens Creek except the Gallagher Zone at \$220/ton; metallurgical recoveries (actual 2021): 81% for silver, 72% for gold, 82% for lead, and 90% for zinc.
- (13) The resource NSR cut-off grades for Lucky Friday are \$170.18 for the 30 Vein, \$184.97 for the Intermediate Veins and \$207.15 for the Lucky Friday Vein; metallurgical recoveries (actual 2021): 95% for silver, 95% for lead, and 90% for zinc.
- (14) The average resource cut-off grades at Casa Berardi are 0.089 oz/ton gold for underground and 0.036 oz/ton gold for open pit; metallurgical recovery (actual 2021): 85% for gold; US\$/CAN\$ exchange rate: 1:1.275.
- (18) Indicated resources for most zones at San Sebastian based on \$1500/oz gold, \$21/oz silver, \$1.15/lb lead, \$1.35/lb zinc and \$3.00/lb copper using a cut-off grade of \$90.72/ton (\$100/tonne); \$1700/oz gold used for Toro, Bronco, and Tigre zones.

 Metallurgical recoveries based on grade dependent recovery curves: recoveries at the mean resource grade average 89% for silver and 84% for gold for oxide material and 85% for silver, 83% for gold, 81% for lead, 86% for zinc, and 83% for copper for sulfide material. Resources reported at a minimum mining width of 6.2 feet (2.5m) for Middle Vein, North Vein, and East Francine, 6.5ft (1.98m) for El Toro, El Bronco, and El Tigre, and 4.9 feet (1.5 m) for Hugh Zone and Andrea.
- (14) Mineral resources for Fire Creek, Hollister and Midas are reported using \$1500/oz gold and \$21/oz silver prices, unless otherwise noted. A minimum mining width is defined as four feet or the vein true thickness plus two feet, whichever is greater.
- (17) Fire Creek mineral resources are reported at a gold equivalent cut-off grade of 0.283 oz/ton. Metallurgical recoveries: 90% for gold and 70% for silver.
- (16) Hollister mineral resources, including the Hatter Graben are reported at a gold equivalent cut-off grade of 0.238 oz/ton. Metallurgical recoveries: 88% for gold and 66% for silver
- (19) Midas mineral resources are reported at a gold equivalent cut-off grade of 0.237 oz/ton. Metallurgical recoveries: 90% for gold and 70% for silver. A gold-equivalent cut-off grade of 0.1 oz/ton and a gold price of \$1700/oz used for Sinter Zone with resources undiluted.
- [26] Measured, indicated and inferred resources at Heva and Hosco are based on \$1,500/oz gold. Resources are without dilution or material loss at a gold cut-off grade of 0.01 oz/ton for open pit and 0.088 oz/ton for underground. Metallurgical recovery: Heva: 95% for gold, Hosco: 87.7% for gold.
- an indicated and Inferred resources at the Star property are reported using \$21 silver, \$0.95 lead, \$1.10 lead, a minimum mining width of 4.3 feet and a cut-off grade of \$100/ton; Metallurgical recovery; 93% for silver, 93% for lead, and 87% for zinc.
- [23] Inferred open-pit resources for Fire Creek calculated November 30, 2017 using gold and silver recoveries of 65% and 30% for oxide material and 60% and 25% for mixed oxide-sulfide material. Indicated Resources reclassified as Inferred in 2019.

 Open pit resources are calculated at \$1400 gold and \$19.83 silver and cut-off grade of 0.01 Au Equivalent oz/ton and is inclusive of 10% mining dilution and 5% ore loss. Open pit mineral resources exclusive of underground mineral resources.
- (23) Inferred resources reported at a minimum mining width of 6.0 feet for Bulldog and a cut-off grade of 6.0 eqiuvalent oz/ton silver and 5.0 feet for Equity and North Amethyst vein at a cut-off grade of \$50/ton and \$100/ton; based on \$1400 Au, \$26.5 Ag,
- 1231 \$0.85 Pb, and \$0.85 Zn. Metallurgical recoveries based on grade dependent recovery curves: recoveries at the mean resource grade average 88% silver and 74% lead for the Bulldog and a constant 85% gold and 85% silver for North Amethyst and Equity.
- (24) Inferred resource at Monte Cristo reported at a minimum mining width of 5.0 feet; resources based on \$1400 Au. \$26.5 Ag using a 0.06 oz/ton gold cut-off grade. Metallurgical recovery; 90% for gold and 90% silver.
- ^[28] Inferred resource at Rock Creek reported at a minimum thickness of 15 feet and a cut-off grade of \$24.50/ton NSR; Metallurgical recoveries: 88% for silver and 92% for copper Resources adjusted based on mining restrictions as defined by U.S. Forest Service, Kootenai National Forest in the June 2003 'Record of Decision, Rock Creek Project'.
- (26) Inferred resource at Montanore reported at a minimum thickness of 15 feet and a cut-off grade of \$24.50/ton NSR; Metallurgical recoveries: 88% for silver and 92% copper.

 Resources adjusted based on mining restrictions as defined by U.S. Forest Service, Kootenai National Forest, Montana DEQ in December 2015 'Joint Final EIS, Montanore Project' and the February 2016 U.S Forest Service Kootenai National Forest 'Record of Decision, Montanore Project'.
